

Hanover Fair 2016

A brief retrospect

With some 190,000 trade visitors from around the world, the Hanover Fair came to an end on 29 April 2016 after five days. Key topics of this year's exhibition were "Integrated Industry" and "Integrated Energy – the Energy System of the Future". Our participation was also all about energy distribution. We presented our products, starting with the mechanical short-circuit indicator to the new ComPass B and Switch ComPass BS with a monitoring and control function. The focus was particularly on system solutions: complete systems including fault detection, monitoring and remote signalling. Be it overhead line or underground cable – we have the right solution for any requirement.

The many interesting discussions we had with national and international visitors sparked plenty of ideas and suggestions for new and further developments – you can look forward to seeing our innovations at Hanover Fair 2017 (24 to 28 April 2017)!
